

USER GUIDE

Simple to install. Simple to use.

Whether it's the transmitter or the receiver; two simple connections are required; one for power; one for the device. Achieve wireless streaming of high definition (HD) video within three easy steps. Eliminating the need for messy hard-wired connections and offering transmission of up to 30 metres. A true plug in and play experience, less cables, less chaos.

Step by step

1. Connect the transmitter unit to your device via the HDMI port and to a power source using the USB Cable

2. Connect the receiver unit to your screen via the HDMI port and to a power source using the USB cable. (user needs to select correct AV input)

3. Ensure the two units have a line of sight less than 30m and enjoy wireless transmission of uncompressed HD video streaming
